

Long Term Data Archive Let's Take It Offline

Let's Take It Offline

Tape, Tape Libraries, RDX Removable Hard Drives

TANDBERG DATA 
Securing your Information

Not all data is the same. It is becoming increasingly important to keep a long term archive of much of your business data. E-mails and business correspondence are subject to long term retention compliance regulations. Staff records need to be kept securely for many years after employees leave your company.

Data growth forces the need to archive as simply deleting data is often not an option. Removing old and rarely accessed data improves system performance and lifespan. Keeping data on relatively expensive high performing disk, is not really appropriate for long term archive.

Data that is rarely accessed and kept for archive purposes is best stored on mediums that have been developed for archive rather than online day to day performance. Archive storage should be robust, able to preserve data integrity for many years, and remain cost effective and efficient.

Online disk is perfect for data you need today, but is not designed for long term retention, offline storage that is not in constant use and not drawing power and constantly "spinning" has been designed for archive.

Tandberg Data has been at the forefront of offline storage technologies for many years, our products includes tape drives, tape automation and RDX® removable disk storage. All perfectly suited for long term data archive.

The market for archive is increasing as data growth spirals, the opportunities for system integrators to help their customers with excellent archive storage solutions are also significant.

Tandberg Data is actively recruiting reseller partners across the Asia Pacific region and have an excellent channel proposition. For more information contact us at salesapac@tandbergdata.com to arrange a meeting with a Tandberg Data representative.
